

Installation Instructions:

When installing, allow 65mm between the "EPIC Oval" and any fixed object. Orientation is otherwise not important, except we recommend having the "EPIC Oval" as far above a steam outlet as possible when used on a steriliser.

Each unit may switch a maximum of 3 amps, typically 2 x ½" solenoids.
When operating on DC, ensure to use solenoids with built-in flyback diodes or varistors.
